DECORATION

We can offer different decoration on our drinkware products

glitter PVC insert

IML printing

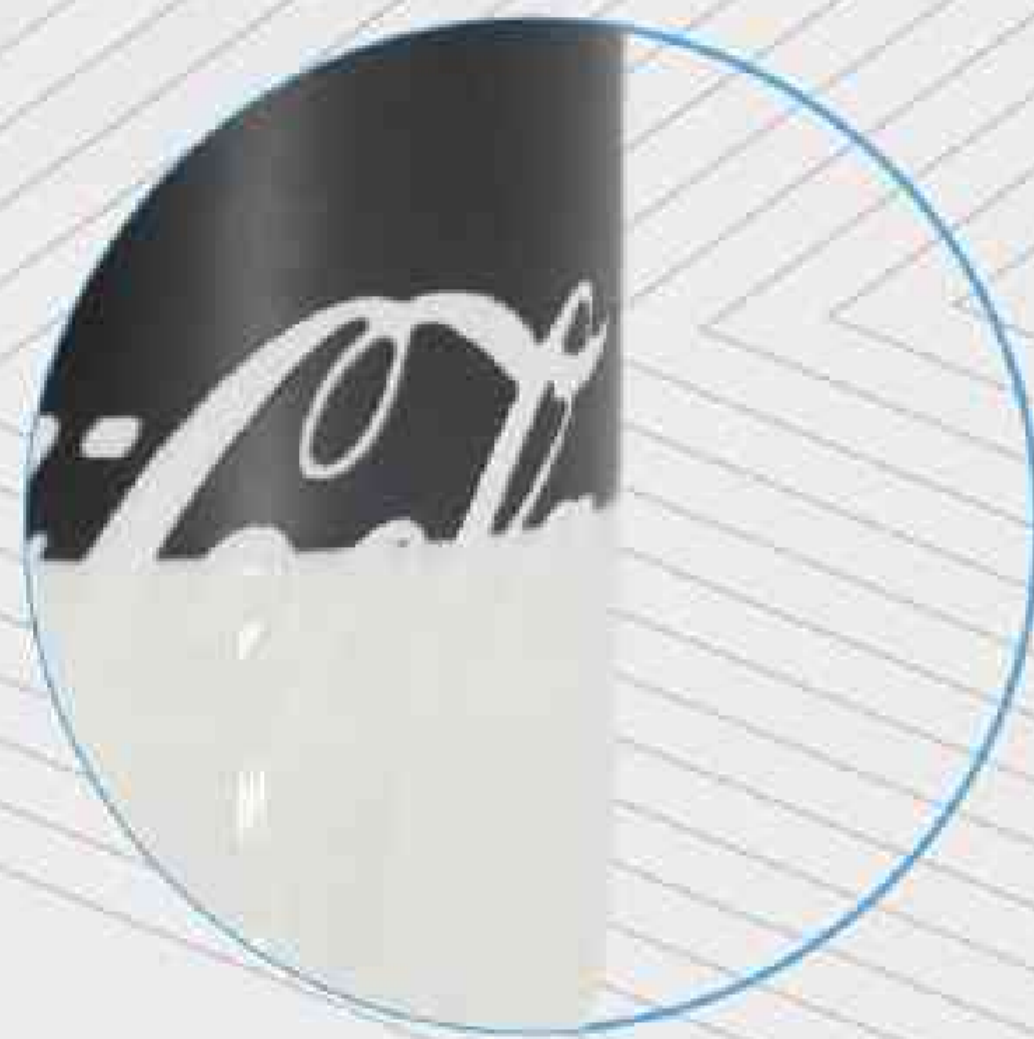

cold water decal

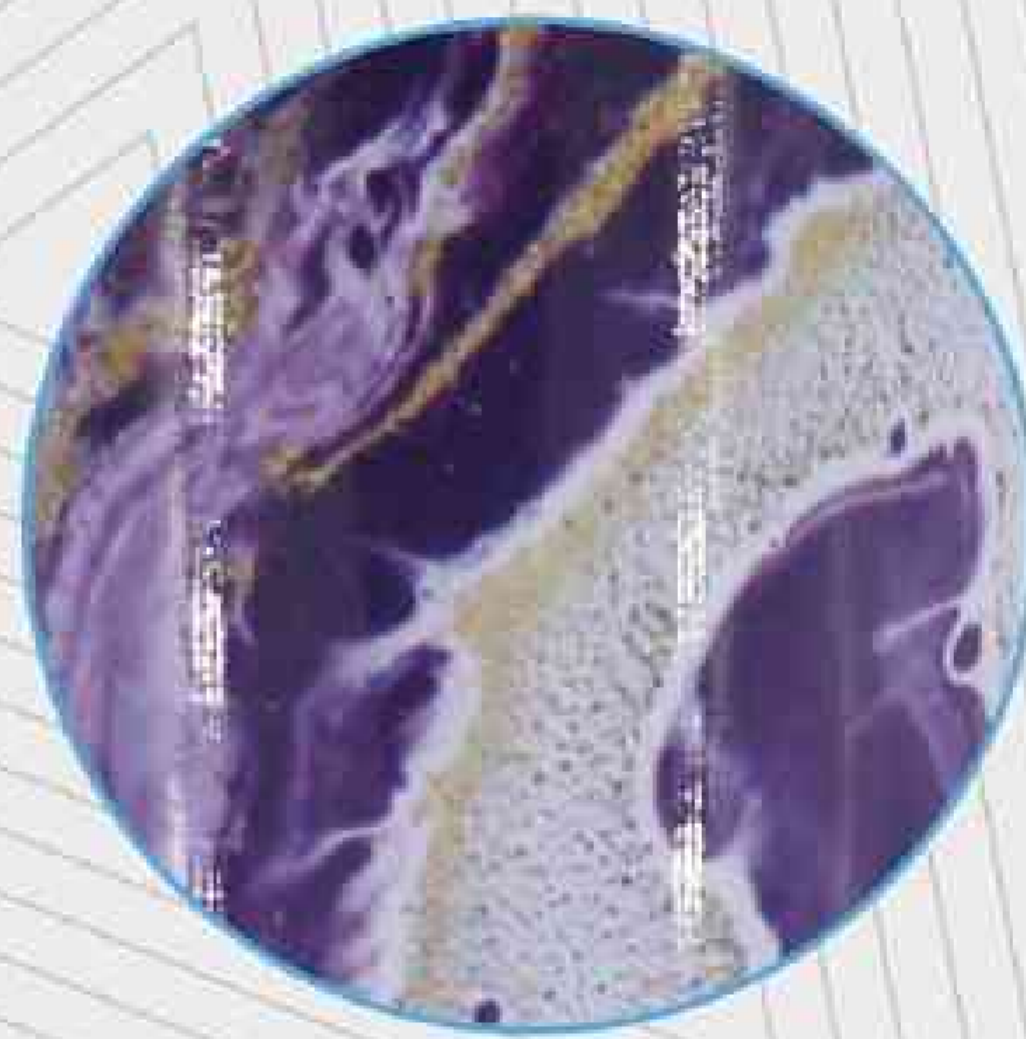

silkscreen printing

laser engraved

sand blasting

air transfer printing

multi color silkscreen printing

heat transfer printing

Heat transfer printing is a newer decoration method, but it's come a long way from the iron-on decals of old. With heat transfer, your custom logo or design is printed onto transfer film and then ink is thermally transferred from the film to the surface using heat and pressure..

digital printing

Digital printing is the process of printing digital-based images directly onto a variety of media substrates. There is no need for a printing plate, unlike with offset printing. Digital files such as PDFs or desktop publishing files can be sent directly to the digital printing press to print on surface.

water transfer printing

Water transfer printing (WTP), also known as immersion printing, water transfer imaging, hydro dipping, watermarbling, cubic printing, water printing, Hydrographics, or HydroGraphics. Water transfer printing technology is a printing technology that uses water pressure to hydrolyze the transfer paper/plastic film with color patterns. As people's requirements for product packaging and decoration increase, water transfer printing has become more and more widely used. Its indirect printing principle and printing effect solve many problems of product surface decoration.
